Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

granulocytes.

DOMAIN: The integrin I-domain (insert) is a VWFA domain. Integrins DOMAIN: The integrin I-domain (insert) is a VWFA domain. Integrins a SIMILARITY: Belongs to the integrin alpha chain family.

SIMILARITY: Contains 7 FG-GAP repeats.

SIMILARITY: Contains 1 VWFA domain.

"Sequence homology of the LPA-1 and Mac-1 leukocyte adhesion

"I springer Integrin alpha-W/beta-2 is implicated in various

as well as in mediating the uptake of complement-coated particles.

It is identical with CR-3, the receptor for the iC3b fragment of the third complement component. It probably recognizes the R-G-D peptide in C3b. Integrin alpha-W/beta-2 is also a receptor for fibrinogen, factor X and ICAM1. It recognizes P1 and P2 peptides

of fibrinogen gamma chain. Alpha-W/beta-2 play a critical role in mast cell development and in immune complex-mediated

glomerationephritis. Mice expressing a null mutation of the alpha-M.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              granulocytes.
-!- DOMAIN: The integrin I-domain (insert) is a VWFA domain. Integrins with I-domains do not undergo protease cleavage.
-!- SIMILARITY: Belongs to the integrin alpha chain family.
-!- SIMILARITY: Contains 7 FG-GAP repeats.
                                                                                                                                                                                                                                                                                                                                                                     subunit gene demonstrate increase in neutrophil accumulation, in response to a impaired degranulation and phagocytosis, events that apparently accelerate apoptosis in neutrophils. These mice develop
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Direct protein sequencing; Glycoprotein; Integrin; Receptor; Repeat;

It recognizes the sequence G-P-R in fibrinogen. It mediates cell-cell interaction during inflammatory responses. It is especially important in monocyte adhesion and chemotaxis. Submit: Heterodimer of an alpha and a beta subunit. Alpha-X associates with beta-2.

SUBCELIGIAR LOCATION: Type I membrane protein.

TISSUE SPECIFICITY: Predominantly expressed in monocytes and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    granulocytes.

DOMAIN: The integrin I-domain (insert) is a VWFA domain. Integrins with I-domains do not undergo protease cleavage.

SIMILARITY: Belongs to the integrin alpha chain family.

SIMILARITY: Contains 7 FG-GAP repeats.

SIMILARITY: Contains 1 VWFA domain.
                                                                                                                                                                              MEDLINE=90153906; PubMed=2303426;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SUBCELLULAR LOCATION: Type I membrane protein.
SUBCELLULAR LOCATION: Type I membrane protein.
TISSUE SPECIFICITY: Expressed moderately on myelomonocytic cell lines and subsets of peripheral blood leukocytes and strongly on tissue-specialized cells, including macrophages foam cells within atherosclerotic plaques, and on splenic red pulp macrophages. DOMAIN: The integrin I-domain (insert) is a VWFA domain. Integrins with I-domains do not undergo protease cleavage.
SIMILARITY: Belongs to the integrin alpha chain family.
SIMILARITY: Contains 1 VWFA domain.
                                                                                                                                                                                                                                                                                                                                        EMBL; U37028; AAB38447.1; EMBL; U40274; AAB60634.1; EMBL; U40274; AAB60635.1; EMBL; U40275; AAB60635.1; EMBL; U40277; AAB60637.1; EMBL; U40277; AAB60637.1; EMBL; U40279; AAB60637.1; EMBL; U40279; AAB60638.1; EMBL; U40278; AAB60638.1; EMBL; U40278; AAB60638.1; GENEY; P11215; 1BHQ.
